

KBP Series Multi-channel Mechanical Seal Rotary Joints

Applicable medium	Temperature	Max pressure	Max Rotary Speed
Water	-30~+80°C	7Mpa	3000RPM
Air			
Hydraulic oil			

Product Features

- ▲ Multi-channel mechanical seal structure can be applied to high-speed rotary compressed air equipment;
- ▲ Supported by two imported ball bearings, the rotation is stable;
- ▲ Multi-spring design structure provides stable spring force for the sealing surface;
- ▲ Balanced mechanical tight structure design, reducing the impact of pressure change load on the sealing surface and prolonging the service life;
- ▲ There is an observation hole in the shell, which can observe the leakage and friction.

IMPORTANT NOTICE

1. Please read the order instructions when ordering, and indicate the working medium and pressure of each channel;
2. After installation, it must be ensured that one leakage hole is vertically downward;
3. The pressure of X1 channel should not be larger than the pressure of X2 channel 04Mpa.
